

# USER MANUAL

This application is purely for learning, but the idea is to register workers and categories or areas. Using Angular for the Frontend part and NET Core for the backend part.

## Roles:

Administrator: Can register workers and categories.

User: Can register workers exclusively

A login form with a green header bar containing the word "Login" in white. Below the header, there are two input fields: "Username" with the text "admin" and "Password" with four dots. At the bottom, there is a green "Login" button.

## Employee Registration and Overview

Welcome to the employee management module, where you can easily create, view, update, and delete employee records in an efficient manner.

This is the basic CRUD functionality, designed to make employee management quick and organized.

From here, you can search for employees, modify their data, and manage their information in an agile environment.

⚡ Main Features:

Register and edit employee records.

Search and filter by categories.

Delete unnecessary records.

Optimized viewing with responsive design.

© 2025 Worker's registry Co.

You can log out and exit the app at any time.
